

b 1 5. A ~~modified~~ head magnifying glass comprising:

1  
b  
tm  
A  
Cont'd  
a fixer with an upper surface and a bottom surface, the fixer having more than one clamps on the bottom surface thereof;

a magnifying plate having tenons stretching out from top portion of the magnifying plate for engaging with the clamps so as to connect the magnifying plate to the fixer;

a pivoting seat on the upper surface of the fixer;

an illuminating body connected to the pivoting seat in such a way that the illuminating body is able to rotate around a first axis.

b 2. The ~~modified~~ head magnifying glass according to Claim 1, wherein the first axis is substantially parallel with the upper surface of the fixer ~~clamps on the~~.

b 3. The ~~modified~~ head magnifying glass according to Claim 1, wherein the clamps on the bottom surface of said fixer face each other in pairs, and the number of tenons on the top portion of the magnifying plate matches that of the corresponding clamps.

b 4. The ~~modified~~ head magnifying glass according Claim 1, further comprising a revolving bracket having a first end and a second end, wherein the first end is pivotally connected to the pivoting seat and the second end is coupled to the illuminating body.

b 5. The ~~modified~~ head magnifying glass according Claim 4, wherein at least one slide-resistant strip is provided on surface of the revolving bracket at the first end and an arc-shaped

stopper is provided on the pivoting seat to allow the revolving bracket to fix the illuminating body at a proper position by means of friction between the slide-resistant strip and the arc-shaped stopper.

10. The ~~modified~~ head magnifying glass according to Claim 8, wherein the illuminating body is pivotally connected with the second end of the revolving bracket, allowing the illuminating body to turn around a second axis.

11. The ~~modified~~ head magnifying glass according to Claim 10, wherein the second axis is substantially perpendicular to the first axis.

12. A ~~modified~~ head magnifying glass comprising:

a sheet-shaped fixer having a first connecting means on a bottom surface of the sheet-shaped fixer;

a magnifying plate having a second connecting means on a top portion of the magnifying plate for engaging with the first connecting means so as to pivotally and removably connect the magnifying plate to the sheet-shaped fixer;

a third connecting means on the upper surface of the sheet-shaped fixer;

an illuminating body pivotally attached to the upper surface of the sheet-shaped fixer through the third connecting means so that the illuminating body is able to rotate around a first axis substantially parallel with the upper surface of the sheet-shaped fixer.

6  
Al  
concl. 29  
13. The ~~modified~~ head magnifying glass according to Claim 8, wherein the illuminating body is structured so as to be able to rotate around a second axis substantially perpendicular to the first axis.

### Remarks

Drawings and specification were objected. Claims 1-4 were rejected under 35 USC §112(2) and §102. Applicant has amended and submitted substitute specification. Claims 1-4 are canceled, and claims 5-13 added. No new matter has been introduced through the amendments. Claims 5-13 remain pending.

### Objection to Drawings

The drawings were objected "because reference characters "3" and "3" have both been used to designate the two different magnifying lenses." Applicant has amended Fig. 5 to use reference number --3'-- designating one of the two different magnifying lenses as shown in the attached sheet. A marked copy of the amended Fig. 5 is also enclosed with the changes indicated in red.

No new matter is introduced through this amendment. Approval of the drawing change is requested.

### Objection to Specification

A substitute specification is enclosed herewith to comply with the objection. The abstract is provided in a separate sheet. Double spaced lines are used in the text. The title is changed. For details, please review the substitute specification.

It is believed that the above amendment has met the objections. Thus, reconsideration and withdrawal of the objections are requested.

### Claim Rejections – 35 USC §112(2):

Claims 1-4 were rejected under 35 USC §112, second paragraph, as being indefinite.
